

Business Question and Visualization Report

Date	21-09-2026
Team ID	MCA
Project Name	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	2 Marks

Visualization Development

Visualization development is the process of representing employee attrition data through graphical and interactive visuals to make the data easier to understand and analyze. In this project, Power BI is used to transform employee-related data into meaningful visualizations that help identify patterns and factors associated with employee attrition. Different charts, graphs, KPI cards, and interactive filters are used to present the data clearly and support data-driven analysis.

Business Questions and Visualisation

The analysis is guided by specific business questions related to employee attrition. These questions help identify important factors such as department, job role, employee engagement, overtime, burnout, work mode, and perceived AI job risk. Appropriate Power BI visualizations are created for each business question to compare employee attrition patterns and provide meaningful insights from the dataset.

1. What is the overall employee attrition rate?

- **Visualization:** KPI Card + Donut Chart
- **Fields:** attrition, employee_id
- **Purpose:** To understand the overall proportion of employees who have left the organization.

2. Which departments have the highest employee attrition?

- **Visualization:** Clustered Column Chart
- **Fields:** department, attrition
- **Purpose:** To identify departments where employee turnover is comparatively higher.

3. How does employee attrition vary across different job roles?

- **Visualization:** Bar Chart
- **Fields:** job_role, attrition

- **Purpose:** To compare attrition across different roles within the organization.

4. What is the relationship between employee engagement and attrition?

- **Visualization:** Column Chart / Scatter Plot
- **Fields:** engagement_score, attrition
- **Purpose:** To examine whether employee engagement levels differ between employees who stayed and those who left.

5. How does overtime workload affect employee attrition?

- **Visualization:** Column Chart
- **Fields:** overtime_hours_per_week, attrition
- **Purpose:** To analyze whether employees with higher overtime workloads show different attrition patterns.

6. Does employee burnout influence attrition?

- **Visualization:** Scatter Plot / Column Chart
- **Fields:** burnout_score, attrition
- **Purpose:** To examine the association between burnout levels and employee turnover.

7. How does work mode affect employee attrition?

- **Visualization:** Donut Chart / Clustered Column Chart
- **Fields:** work_mode, attrition
- **Categories:** Onsite, Hybrid, Remote
- **Purpose:** To compare attrition patterns across different working arrangements.

8. Does perceived AI job risk have a relationship with employee attrition?

- **Visualization:** Scatter Plot / Column Chart
- **Fields:** perceived_ai_job_risk, attrition
- **Purpose:** To examine whether employees' perceived risk of AI affecting their jobs is associated with attrition.
