Team ID	MCA
Project Title	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	2 Marks

Data Collection Plan & Raw Data Sources Identification Template

Elevate your data strategy with the Data Collection plan and the Raw Data Sources report, ensuring meticulous data curation and integrity for informed decision-making in every analysis and decision-making endeavor.

Data Collection Plan Template

Section	Description
Project Overview	Analyzes a 5,000-record employee HR dataset to quantify overall and segment-level attrition (17.9%, 895 employees), identify the strongest predictors of attrition (burnout, overtime, compensation growth, tenure, performance), and build an interactive Power BI dashboard with AI-assisted insights for HR and leadership decision-making.
Data Collection Plan	Data was collected as a single structured HR dataset (CSV) containing employee-level records with 29 attributes per employee — demographics, job details, compensation, tenure, workload, engagement, performance, AI tool adoption, and the attrition outcome — loaded directly into Power BI for cleaning, transformation, and analysis.
Raw Data Sources Identified	One primary raw data source was identified: the Employee HR Dataset, containing 5,000 employee records (895 attrition cases, 17.9%) used as the sole input for this analysis.

Raw Data Sources Template

Source Name	Description	Location/URL	Format	Size	Access Permissions
Employee HR Dataset	Employee-level HR data covering demographics, compensation, tenure, workload, engagement, performance, AI tool usage, and attrition outcome (29 attributes per employee).	Internal HR dataset file (employee_attrition_dataset.csv), loaded directly into Power BI	CSV	5,000 rows × 29 columns (~1–2 MB)	Private (internal HR/analytics team use only)
Department & Job Role Reference Table	Lookup/dimension data mapping department, job_role, and work_mode categories, used to	Derived from the Employee HR Dataset via Power Query dimension tables	CSV / Power Query table	< 1 MB (lookup tables)	Private (internal HR/analytics team use only)

	build relationships in the Power BI data model.				
Processed Power BI Data Model	Cleaned and transformed version of the Employee HR Dataset, stored within the Power BI data model after preprocessing, used to power the dashboard and reports.	powerBIprojectFile.pbix (local Power BI Desktop file)	PBIX (Power BI Data Model)	~224 KB (compressed data model)	Private (project team use only)
