

Project Initialization and Planning Phase

Date	21-09-2026
Team ID	MCA
Project Name	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Employee attrition is a major challenge for organizations because frequent employee turnover can increase recruitment costs, training expenses, workload on existing employees, and productivity losses. However, organizations often struggle to identify the key factors that cause employees to leave. The problem is to analyze employee data and determine the factors associated with employee attrition, examining aspects such as job role, department, salary, job satisfaction, overtime, work-life balance, years of experience, and other employee characteristics to identify patterns among employees who leave. The goal is to generate data-driven insights that help HR teams understand attrition drivers, identify high-risk employee groups, and support effective employee retention strategies.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Priya Nair, Chief People	understand how	I can't easily	attrition-related	uncertain when setting retention

	Officer at a mid-size technology company	department, job role, work mode, and AI tool adoption impact employee attrition across the organization	tell which departments and roles are most at risk of losing talent	data is scattered across systems instead of a single interactive dashboard for quarterly workforce planning and board reporting	budgets and unable to confidently design targeted interventions for high-risk departments and roles
PS-2	Marcus Webb, People Analytics Manager monitoring employee engagement and workload	analyze how overtime hours, burnout score, manager support, and work-life balance influence the likelihood of an employee leaving	I can't spot early warning signs of disengagement before employees actually decide to leave	there is no unified way to flag teams at risk of burnout-driven attrition in time for preventive action	reactive instead of proactive, worried that workload rebalancing and manager coaching come too late to prevent turnover
PS-3	Dr. Sofia Alvarez, Workforce Research Lead	analyze how salary hike percentage, years	I struggle to pinpoint	compensation, promotion, and performance	unable to give HR leadership confident, evidence-based recommendations

	studying compensati on growth and career progression	since promotion, performan ce ratings, and training investment affect attrition risk across career levels	which of these factors are the strong est predict ors of attritio n at each career stage	nce data are not analyzed together to reveal clear career- stage patterns	ns on compensation and promotion policy
