

Report

Date	21-09-2026
Team ID	MCA
Project Name	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	5 Marks

A report is a comprehensive document that provides a detailed and structured account of data analysis, findings, and insights. It is typically used for in-depth analysis, documentation, and communication of results. Reports are suitable for a diverse audience, including decision-makers, analysts, and stakeholders who need a comprehensive understanding of the data.

Designing a report in Power BI involves connecting to data sources, creating visualizations like charts and graphs, customizing their appearance and interactivity, organizing them logically on the canvas, formatting elements for consistency and clarity, and optionally creating dashboards for a summarized view. Throughout the process, it is essential to consider the audience's needs and ensure the report effectively communicates insights from the data. Finally, iterate based on feedback to continually improve the report's design and usefulness.

Observations drawn from reports in Power BI can provide valuable insights into business performance and trends.

Key Observation Categories

1. **Trends Over Time:** Analyze how key metrics (e.g., attrition rate, engagement, burnout) change over different time periods or tenure bands to identify growth patterns or risk windows.
2. **Performance Comparisons:** Compare performance and attrition across categories such as departments, job levels, work modes, and education backgrounds to determine which areas are excelling or underperforming.
3. **Employee Segmentation:** Assess demographic and workplace data (age, marital status, education, overtime intensity) to understand employee segments and tailor retention strategies accordingly.
4. **Goal Achievement:** Measure progress against established KPIs (attrition rate, engagement index, manager support, burnout score) to assess whether workforce goals are being met.

Report 1: Employee Retention Performance Intelligence

This report focuses on retention drivers including burnout, work-life balance, engagement, manager support, salary growth, education, work mode, tenure, and career level. Interactive filters for Education Level and Work Mode enable targeted exploration.

Figure 1: Employee Retention Performance Intelligence Report

Key Insights – Retention Performance

- Highest Attrition Rate:** Employees with **18.10 years** at the company recorded the highest Attrition Rate at **1.00**, followed by 16.10 and 15.10 years, highlighting elevated risk in later career tenure bands.
- Lowest Attrition Rate:** Employees with **11.60 years** at the company recorded the lowest Attrition Rate at **0.04**, indicating a relatively stable mid-tenure cohort.
- Wide Variation Across Tenure:** Across all 146 years-at-company values, Attrition Rate ranged from **0.04 to 1.00**, demonstrating substantial volatility in retention risk depending on tenure stage.
- Education Impact:** Employees with a **Bachelor's degree** had the highest Attrition Rate at **0.19**, representing 2,562 employees—the largest education cohort in the analysis.
- Work Arrangement & Burnout:** Hybrid employees with a **Very High Burnout Score** contributed **18.89%** of the overall Attrition Rate, making this combination a critical risk segment.
- Burnout Impact:** Employees in the **Very High Burnout** category had the highest average Attrition Rate at **0.49**, followed by High, Moderate, and Low burnout levels—confirming burnout as a primary retention lever.

Report 2: Employee Performance Career Growth Intelligence

This report examines performance ratings, manager support, age, work experience, overtime intensity, training investment, career stages, marital status, and department-wise attrition. Filters for Gender and Marital Status support demographic slicing.

Figure 2: Employee Performance Career Growth Intelligence Report

Key Insights – Performance & Career Growth

1. **Headline Metrics:** Average Performance Rating **3.62**, Average Manager Support **6.61**, Average Employee Age **37.12**, Average Work Experience **11.70 years**, and Average Weekly Overtime **6.83 hours**.
2. **Attrition Risk by Overtime Intensity:** Attrition climbs sharply with overtime load—from **0.12** (1–5 hrs/week) to **0.54** (21–30 hrs/week)—indicating overtime intensity as a strong attrition driver.
3. **Attrition Risk Across Performance Levels:** Lower-rated performers (rating 2) show markedly higher attrition (**0.29**) than top performers (rating 5, **0.08**), underscoring the link between performance and retention.
4. **Attrition Risk by Training / Burnout Investment:** Attrition falls from **0.54** among employees with Very High burnout to **0.05** among those with Low burnout, reinforcing burnout reduction and training/support investment as key retention levers.
5. **Attrition Patterns Across Career Stages (by Age):** Attrition remains relatively stable through most career stages, with a pronounced spike around the late-50s age range—suggesting a critical retention window near career maturity.
6. **Employee Retention by Marital Status:** Married employees make up the largest share of both retained and departed employees, followed by Single and Divorced cohorts.
7. **Department-Wise Attrition Rate:** Customer Support leads at **16.51%**, followed by Sales (**13.73%**) and Operations (**12.44%**). Engineering and Research & Development show the lowest attrition rates.

Summary

Together, the Employee Retention Performance Intelligence and Employee Performance Career Growth Intelligence reports provide a multi-dimensional view of workforce risk and opportunity. Key takeaways include elevated attrition among long-tenure employees, Bachelor's degree holders, hybrid workers with very high burnout, high-overtime cohorts, and lower-rated performers. Department-level analysis confirms Customer Support as the highest-risk function. These insights enable targeted interventions around burnout mitigation, overtime management, performance development, and department-specific retention programs.
